Custom Vibration Isolation Solutions

Herzan has successfully designed numerous custom solutions ranging from large scale acoustic enclosures, tabletop active vibration isolation systems and custom EMI Isolation systems. These custom solutions began with an intensive design and engineering process with Herzan's technical staff to ensure all nuances within the requirements of an application were addressed.

The most popular custom solutions range from unique acoustic enclosure systems to integrated tabletop active or passive vibration isolation systems. If a customer prefers to have a tabletop configuration, but still wants to receive the excellent performance of an AVI-200 system, **Warsash Scientific** and Herzan can easily design an integrated solution to meet the needs for functionality, quality and performance.

We are happy to work closely with customers to tailor a solution around the various requirements of a specific application, ensuring the best results possible.

For OEM and custom vibration isolation solutions, contact Warsash Scientific on +61 2 9319 0122 or sales@warsash.com.au.
