

PRESS RELEASE

18 June 2014

Warsash Scientific now a distributor for Femtonics

***Warsash Scientific** are pleased to announce that they have been selected as the distributors for the **Femtonics** range of Two-photon microscopes, modules and accessories in the Oceania region.*

Femtonics focuses on the research and development of two-photon laser scanning microscopes for the booming area of (neuro)physiological investigations. Microscopes are tuned for the fastest 2D and 3D optical measurements and are especially suited for cutting-edge brain research and pharmaceutical development. Furthermore, their modular nature ensures that they can be easily adapted to suit other applications, including biophysical use.

The Femto2D is one in a range of two-photon imaging microscopes. There are twelve standard configurations of Femto2D microscopes as a combination of the three aspects: Product Line; Sample Thickness and Orientation. All configurations are fully functional and ready to be integrated in labs.

For more information, contact Warsash Scientific on +61 2 9319 0122 or sales@warsash.com.au.
