

PRESS RELEASE

07 May 2014

Complete Services for SEM Users

*The SEM Service Suite from **Herzan** is a complete array of services tailored to optimise the experience of an SEM user receiving an AVI platform. Services provided address all AVI platform needs from the moment the AVI platform is purchased to the verification of performance.*

SEM SERVICE SUITE (SEM-SS)

The SEM Service Suite (SEM-SS) is designed to create the best experience for SEM users with Herzan's active vibration isolation (AVI) platform, available from **Warsash Scientific**. The SEM-SS is intended for end users who already have an SEM in their laboratory and have measured environmental data via a site survey. With no hidden costs, concerns or additional liabilities, the SEM-SS delivers a seamless and worry-free experience for any SEM user.

SEM SERVICE SUITE PLUS (SEM-SS+)

The SEM Service Suite Plus (SEM-SS+) is an all-encompassing collection of services tailored to address any aspect of the discovery process an SEM user may have when searching for a vibration isolation platform.

In addition to the extensive services found in the SEM-SS, the SEM-SS+ includes a comprehensive site survey analysis with a curated report, measuring all types of environmental noise (vibration, acoustic, and AC/DC EMI noise). The site survey process includes: environmental data collection, analysis, and recommendations should they be necessary.

The SEM-SS+ is intended for end users planning to receive an SEM in a new laboratory and are needing a complete understanding of the ambient environmental characteristics before instrument installation begins. It is often required by instrument manufacturers.

For more information, contact Warsash Scientific on +61 2 9319 0122 or sales@warsash.com.au.
