

PRESS RELEASE
17 January 2013

PiezoMove[®] Linear Actuator for Open-Loop Operation

*The extremely cost-efficient and compact P-604 lever actuator supplements the portfolio of the PiezoMove[®] series from **PI (Physik Instrumente)**. The linear actuator achieves a travel range of 300µm and is exclusively designed for open-loop operation.*

The P-604 PiezoMove linear actuator features properties that make it ideal for OEM applications in optics, medicine, biotechnology and microfluidics. It is designed for a particularly cost-effective production of large quantities and its installation space is kept to a minimum (19.5 x 13 x 4.1mm).

PICMA[®] multilayer piezo actuators are the driving force of the P-604-type lever actuators. They have an all-ceramic encapsulation that makes them extremely robust and durable.

Well-known for the high quality of its products, PI (Physik Instrumente) has been one of the leading players in the global market for precision positioning technology for many years. PI's product range is available from **Warsash Scientific** in Australia and New Zealand, a long-time distributor, and reliable technology partner and consultant.

For more information, contact Warsash Scientific on +61 2 9319 0122 or sales@warsash.com.au.
